

Question Number	Scheme	Marks
1.	$P(\text{Not } 6) = 1 - \frac{1}{6} = \frac{5}{6}$ $P(6 \text{ on third throw}) = \frac{5}{6} \times \frac{5}{6} \times \frac{1}{6} = 0.116$ $= \frac{25}{216} = 0.1157... \text{ (accept 0.116)}$	B1 (1) M1 A1ft A1 (3) (4 marks)
2.	Observe real world problem Devise a statistical model and collect data Compare observed against expected outcomes and test the model Refine model if necessary	B1 B1 B1 B1 (4) (4 marks)
3.	<p>(a) $P(B A)$ = Probability of B, given A has occurred</p> <p>(b)</p>  <p>$P(\text{Amber is late}) = 0.5 \times 0.02$ $= 0.01$</p>  <p>(e) $P(\text{Late}) = 0.03 + 0.01 + 0.002 = 0.042$ $= 0.042$</p>	B1, B1 (2) A & B no overlap B1 B1 (2) M1 A1 cao (2) complete diagram M1 0.49; 0.01 B1 0.198; 0.002 B1 0.27; 0.03 B1 (4) intersections, three of them added M1 A1 cao (2) (12 marks)

ft = follow-through mark; cao = correct answer only

Question Number	Scheme	Marks
6.	(a) Frequency densities – 5, 0, 10, 4, 110, 75, 1.7 Graph: scales and labels, shape, correct frequency densities	B1 B1, M1, A1 (4)
	(b) $\Sigma fy = 2888.5$ Mean weight = $14 + \frac{2888.5}{50 \times 10}$ $= 19.777$ accept 19.78/19.8 $S_y = \sqrt{\frac{171503.75}{50} - \left(\frac{2888.5}{50}\right)^2}$ $= 9.62819...$ awrt 9.63 Standard deviation of weight = $\frac{9.62819}{10} = 0.96219...$ accept 0.963/0.96 (NB: Using $n - 1$ gives 0.9725...)	B1 M1 A1 M1 A1 A1ft (6)
	(c) $Q_2 = 20.0 + \frac{(25 - 12)}{22} \times 0.2$ $= 20.118...$ accept 20.1/20.12	M1 A1 (2)
	(d) Median – data skewed Mean – lower value; fewer complaints	B1 B1 (2)
		(14 marks)

awrt = anything which rounds to

Question Number	Scheme	Marks
7.	(a) $\Sigma t = 169; \Sigma c = 357$ $S_{cc} = 14245 - \frac{357^2}{10} = 1500.1$ $S_{tt} = 168.9, S_{ct} = 492.7$ $r = \frac{492.7}{\sqrt{1500.1 \times 168.9}}$ $= 0.97883\dots$ accept 0.979	M1 A1 A1, A1 M1 A1 A1 (7)
	(b) Since r close to 1, value supports use of regression line	B1 B1 (2)
	(c) $b = \frac{S_{ct}}{S_{tt}} = \frac{492.7}{168.9} = 2.91711\dots$ $a = \bar{c} - b\bar{t} = \frac{357}{10} - \frac{492.7}{168.9} \times \frac{169}{10} = -13.59917\dots$ $c = -13.6 + 2.92t$	B1 B1 (3)
	(d) 3 extra ice-creams are sold for every 1 °C increase in temperature	B1 (1)
	(e) $c = -13.6 + 2.92 \times 16 = 33.12$ i.e. 33 ice-creams	M1 A1 A1 (3)
	(f) Temperature likely to be outside range of validity	B1 (1)
		(17 marks)
